## **NEW! Self-Adhering Window Films!**

Self-Adhering adhesives enable environmentally robust, high-quality optical bonds with low- or no-pressure lamination. The film offers “controlled adhesion,” and permits removability and reapplication, even after an extended period of time. Self-Adhering adhesive technology is utilized as surface protection films for touch screens and flat panel displays.

These films can be applied wet or dry and can be used wherever superior clarity and smoothness are required. We offer 3 years' outdoor durability, 5-15 year indoor durability and a 6-month clean removability from glass, Plexiglas and acrylic sheeting surfaces, and features a 2-year shelf life

### **Benefits of this technology:**

- Adhesive virtually self-applies by spontaneously “wetting out” onto smooth surfaces
- Enables low- or no-pressure lamination
- Ultra low peels without adhesive buildup
- Cleanly removable/repositionable/reusable – even at extended periods of time
- High shear resistance prevents displacement
- Environmentally robust
- Does not build triboelectric charge when removed

With Decorative Film’s new self-adhering removable silicone adhesive, haze is eliminated, resulting in a perfect, optically clear application – wet or dry – even for the least experienced installer.”
